

Health Data Utilities: Tackling Health Care Challenges Through Nonprofit, State-Based Solutions

October 16, 2024
2024 Civitas Networks for Health Annual
Conference

What is CSRI?

The Consortium for State and Regional Interoperability (CSRI) is a collection of the nation's largest and most robust nonprofit health data networks. Collectively, our nonprofit organizations connect over 80 million records for patients across several states and provide a wide range of services to health care organizations.

Our members include: Contexture, CRISP, CyncHealth, Indiana Health Information Exchange, and Manifest MedEx.

What Is a Health Data Utility?

A health data utility is a public-private resource that provides a source of truth for robust clinical and non-clinical data, which can be leveraged by state and other health care system stakeholders to achieve healthier communities.

Health Data Utility Key Characteristics

- Serves as a health information exchange and partners with state agencies, payers, and public health departments
- Integrates clinical and non-clinical data for actionable insights and improved care coordination
- Adapts to changes and builds trust by demonstrating ROI and addressing evolving healthcare needs
